Geo Web Technologies

Course Description:
This course is an introduction to a number of GeoWeb applications used for information dissemination, resource discovery and access. Through hands-on exercises, lectures and discussions, this online course provides an overview of the many online geographic applications used across disciplines. Some of the topics covered include virtual Earth programs, Map mashups, citizen mapping, Online GIS technologies and Story Mapping. Students will create projects applicable to libraries.

Prerequisites
None.

Course Structure: This course is composed of weekly lectures, tutorials, readings and assignments.
